

MUHAMMED ENES YALÇIN

Information Technologies Student | Aspiring Software Developer

Kayseri, Türkiye | +90 506 242 10 98 | ynes8372@gmail.com | github.com/heisenberg1098 | [Blog](#)

PROFILE

Information Technologies high-school student with a strong interest in software development and cybersecurity. Experienced in building desktop applications, security analysis tools, and data-visualization frameworks using C#, C++, Python, Java, and JavaScript. Focused on problem solving, writing clean and maintainable code, and continuous self-learning. Seeking an internship or junior position to contribute to real-world engineering projects and grow within an experienced team.

EDUCATION

OSB Technical College — Information Technologies Department

2022 – Present

11th Grade • Kayseri, Türkiye

TECHNICAL SKILLS

Programming Languages: C#, C++, Python, Java, JavaScript

Application Development: Desktop applications (.NET / WinForms), script-based tools

Libraries & Frameworks: Python data analysis (pandas, matplotlib), Node.js ecosystem

Tools & Environments: Git, GitHub, Visual Studio, VS Code, Windows & Linux

Core Competencies: Algorithm design, problem solving, software testing, clean code, debugging

Areas of Interest: Cybersecurity, network security, data visualization, open source

PROJECTS

Apparatus — IoT Security Analysis Tool — *JavaScript*

[GitHub](#)

- Developed a graph-based analysis tool that visually maps security weaknesses across IoT networks.
- Designed JavaScript modules to model devices, communication links, and data flows, highlighting weak points between network components.
- Presented results through an interactive graphical interface, making risk assessment accessible to non-technical users.

BaRMle — Java RMI Vulnerability Scanner — *Java*

[GitHub](#)

- Worked on a command-line tool that scans Java RMI (Remote Method Invocation) services to automatically detect known attack vectors and vulnerabilities.
- Implemented test modules for remote object enumeration, deserialization flaws, and weak configuration checks.
- Adopted a modular, reusable architecture well suited to penetration-testing workflows.

DataViz — DNS Data Visualization Framework — *Python*

[GitHub](#)

- Built a Python framework that transforms large-volume DNS log data into clear, insight-driven visualizations.
- Created matplotlib-based plotting modules and a data-cleaning pipeline to analyze traffic patterns, anomaly density, and domain distribution.
- Designed extensible parsers for multiple log formats, making the framework reusable across datasets.

CERTIFICATIONS & TRAINING

- Data Analysis with Python** — Udemy, 2024
- Desktop Application Development with C#** — BTK Academy, 2023

LANGUAGES

Turkish (Native) • **English** (Intermediate — technical reading proficiency)

CAREER OBJECTIVE

To grow into a software engineer building secure, scalable, and user-focused systems. In the short term, I aim to gain real-world experience in cybersecurity and data-driven software projects; in the long term, to become a competent engineer in system design and secure software architecture.
